FOR IMMEDIATE RELEASE

IMAGINE CHANGING LIGHT BULBS AND BALLASTS WITHOUT EVER STEPPING ONTO A LADDER OR SWITCHING OFF THE LIGHT

*Press conference and demonstration at LIGHTFAIR INTERNATIONAL, May 30, 2-3 p.m. at booth #4925:
"Ladderless™" Recessed Downlight Fixtures, Saving Precious Maintenance Time and Dollars.*

TWINSBURG, OH – May 9, 2006 – Accessmount™ LLC introduces the newest addition to its "Ladderless™" product line, Recessed Downlights, at LIGHTFAIR INTERNATIONAL 2006. Accessmount's "Ladderless™" Recessed Downlights include a patent-pending removable subassembly containing the lamp, ballast and reflector. By using a pole-mountable removal tool, maintenance personnel are able to safely and simply remove the subassembly in hard-to-reach areas without ever climbing a ladder.

These revolutionary light fixtures allow for placement in high ceilings, above staircases or high-traffic areas. Benefits of Accessmount's "Ladderless" Recessed Downlight Fixtures include:

- Eliminate the risk of ladder accidents
- Energy-efficient compact fluorescent lamps
- Ballast removed with lamp; no more difficult ballast changes
- Critical components hot-swapped in under ten seconds
- Fixture maintenance can be performed with live circuits
- Multiple sizes and lamp configurations available

The founder and President of Accessmount, Nelson Pitlor, invented the Retrofittable Removable Mounting System, which won the "2002 LIGHTFAIR INTERNATIONAL Technical Innovation Award" and was included in the 2003 IESNA Progress Report.

Accessmount LLC, a Twinsburg, Ohio based Company, offers Retrofittable Removable Fixture Mounting Systems, "Ladderless" Flush-Mount Fixtures and "Ladderless" Recessed Downlight Fixtures. For product photos and more information, visit www.accessmount.com/pressroom.
